(a)
single-cell → bulk (validation)
composition R² (marker genes)
training step (thousands)
unpaired CycleGAN
CycleGAN + composition labels
mean shift (start)
ComBat
(b)
bulk → single-cell (validation)
unpaired CycleGAN
CycleGAN + composition labels
ComBat (start)
training step (thousands)
(c)
toward the right sample (validation)
sample-specific part of the move
(cosine, true − another donor)
single-cell → bulk
bulk → single-cell
unpaired CycleGAN
CycleGAN + composition labels
paired ridge regression
(d)
finding its own sample (test)
vs. mean shift (its start)
vs. ComBat
vs. CORAL
vs. best blend at equal accuracy
vs. ComBat (its start)
vs. mean shift
vs. CORAL
vs. best blend at equal accuracy
CycleGAN minus method, 95% CI
